

Solentris

A completely integrated business software solution that is so intelligent it is like each of your employees having their own personal assistant.

Solentris combines the power of the most flexible and integrated business software solution with the world's only Virtual Manager that monitors your business.

No servers or software to install.

Solentris is hosted in a secured data center and optimized for access through a browser such as Internet Explorer, Mozilla and more.

Access your system from anywhere!

A powerful security system allows you to access your system from the office, home, on the road or wherever you need it!

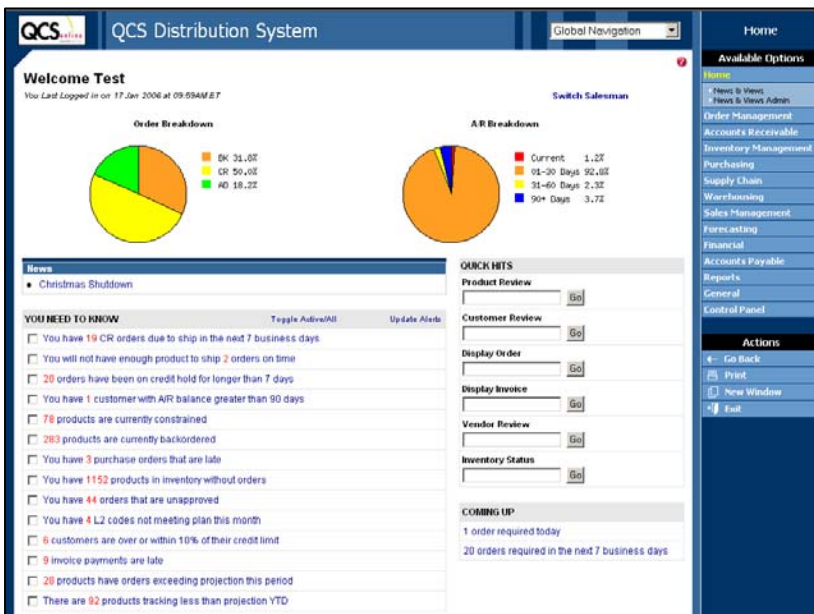

Solentris grows with your business.

Each Solentris module can be quickly and efficiently customized to meet your organization's business requirements. No other system in the world can be enhanced as quickly as Solentris.

Solentris' Virtual Manager takes the guess-work out of business reporting.

Solentris' Virtual Manager is like having your own personal assistant continually reviewing Solentris and reporting back to you on the status of your business. Solentris' Virtual Manager does all of the hard work analyzing hundreds of reports and reporting back to you so that you can spend more time managing your business.

Complete integration of all modules.

All of Solentris' software applications are designed to interact with each other. This means your users get access to information immediately with no duplicate entry.

Powerful applications that support your operation.

Solentris' applications are designed to support even the most complex operating environments from multiple warehouses and global locations to customized sales and production planning to advanced accounting requirements.
